Patent No. 6087109

GENERAL INFORMATION:
APPLICANT: Waldman, Scott A.
TITLE OF INVENTION: Compositions That Specifically
TITLE OF INVENTION: And Methods Of Using The Same
NUMBER OF SEQUENCES: 54
CORRESPONDENCE ADDRESS:
ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz &
ADDRESSEE: No. 6087109ris
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Compositions That Specifically
Bind To Colorectal Cancer Cells
And Methods Of Using The Same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FILING DAYE:

JOSTICS APPLICATION US/09138237A

Sequence 2, Application US/09138237A

Patent No. 6268159

GENERAL INFORMATION:
TITLE OF INVENTION: ST Receptor Binding Compounds and Methods
TITLE OF INVENTION: of Using the Same
TUTLE OF INVENTION:
CORRESPONDENCE: 54

CORRESPONDENCE: Mondowck Washburn Kurtz Mackiewicz and No. 6268159ris
STREET: One Liberty Place - 46th Floor
CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       APPLICANT: Waldman, Scott A.

Sequence 38, Application US/08141892A

Patent No. 551888

GENERAL INFORMATION:

APPLICANT: Waldman, Scott A.

TITLE OF INVENTION:

TITLE OF INVENTION: of Using the Same

TITLE OF INVENTION: of Using the Same

TITLE OF INVENTION: of Using the Same

NUMBER OF SEQUENCES:

ADDRESSE: woodcock Washburn Kurtz Mackiewicz and No. 5518888ris

STREET: One Liberty Place - 46th Floor

CITY: Philadelphia

STATE: Pennsylvania

COUNTRY: U.S.A.

ZIP: 19103

COMPUTER READABLE FORM:

MEDIUM TYPE: 3.5 inch disk, 720 Kb

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

COMPUTER: OPERATINE: PC-DOS/MS-DOS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                            -I- FUNCTION: Toxin which activates the particulate form of guanylate cyclase and increases cyclic GMP levels within the host intestinal epithelial cells (By similarity).
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: Belongs to the heat-stable enterotoxin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         enterotoxin (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SEQUENCE FROM N.A.

                                                                                                                                                                                        Microb. Pathog. 23:189-200(1997).
-!- FUNCTION: Toxin which activates the particulate form of guanyla cyclase and increases cyclic GMP levels within the host intesti epithelial cells. Could play an important role in pathogenesis.
-!- SUBCELLULAR LOCATION: Secreted.
-!- SIMILARITY: Belongs to the heat-stable enterotoxin family.
STRAIN=84-50 / Serotype 0:5;

15 Alpha-conotoxin GIA.
13 Alpha-conotoxin GI.
Biochemistry 38:11895-11904 (1999).

-!- FUNCTION: Alpha-conotoxins act on postsynaptic membranes, they bind to the nicotinic acetylcholine receptors (MAChR) and thus inhibit them. The higher affinity site for alpha-conotoxin GI is the alpha/delta site on mouse muscle-deriverd BC3H-1 receptor, an the other site (alpha/gamma site) on nicotinic receptors from Torpedo californica electric organ.
-!- SUBCELULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom duct.
-!- SIMILARITY: Belongs to the conotoxin A-superfamily. Alpha-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

The invention relates to a conjugated compound that comprises a ST (heatstable toxin) receptor moiety selected from one of the sequences shown in AAV40508-Y40559 and an active moiety (antisense molecule). The compound is useful for the treatment of colorectal cancer. The use of the conjugated compound is advantageous compared to antibodies since it binds specifically to colorectal cells and has no toxic effect on normal cells. The present sequence represents the amino acid sequence of a ST receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Immunogenic, hepadnavirus nucleocapsid protein, hepatitis B core, HBc,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New conjugated compounds are provided which consist of (1) an ST receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    binding molety and (2) an active molety which is a radio- stable agent.

ST. refers to a heat stable toxin produced by E.coli and other organisms. Especially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitcmycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastissed tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Conjugated compound; ST receptor; heat-stable; toxin; colorectal cancer.

The invention relates to a recombinant hepadnavirus nucleocapsid protein, i.e. a chimeric hepatitis B core (HBC) protein (1), displaying one or more immunogenic epitopes at the N-terminus, HBC immunogenic loop (L) or C-terminus, or having a heterologous linker for a conjugated epitope in C-terminus containing a Cys residue at, or near, the C-terminus that confers enhanced stability to the particles. A vaccine comprising (1) is useful for inducing an immune response in an inoculated host animal, by inoculated animal with the vaccine, and maintaining that inoculated animal for a time period sufficient for that animal, by inoculated animal for a time period sufficient for that animal to develop an immune response. The immunogenic particles formed using (I) are substantially free of binding to nucleic acids, and are most stable than the particle formed from otherwise identical HBc chimer that lacks the creatidue. The chimer particles are most seable on storage in aqueous compositions that are particles are most estable on storage in aqueous compositions that are particles are most estable on storage in aqueous compositions that are particles are most exhibits the self-assembly not excellent B cell and T cell immunogenicities. The chimer particles are often far more immunogenic than the similar conjugates that lack a C-terminal Cys. Immunogenic than the similar conjugates that lack a C-terminal Cys. Immunogenic than similar particles assembled from the chimer molecules are enhanced as compared to similar particles assembled from chimer molecules are enhanced as compared to similar particles and main of the invention acides and near the invention acides and near the invention acides and near the invention of the inve
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
Novel recombinant hepadnavirus nucleocapsid protein, termed as chimeric hepatitis B core protein, displays immunogenic epitopes at N-terminus, HBc immunogenic loop with linker for conjugated epitope and C-terminus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     hepatotropic, virucide, antiinflammatory; chronic hepatitis; vaccine; recombinant hepatitis B core chimeric protein; HBc chimeric protein; hepatitis B infection; T-cel stimulator; B-cell epitope.

                                                                                                                                                             The invention describes a method of treating chronic hepatitis comprising administering to a patient a T cell-stimulating amount of a vaccine comprising immunogenic particles dissolved or dispersed in a diluent, where the immunogenic particles desconsists of recombinant hepatitis B core (HBC) chimeric protein molecules, and maintaining the patient to induce T cinvention are useful for treating chronic hepatitis B infection. This is the amino acid sequence of a chimeric hepatitis B infection. This is the amino acid sequence of a chimeric hepatitis B infection. This is epitope useful for expression within the HBV chimer at the N-terminus,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant chimer avian hepatitis B core protein molecule, useful as an immunogen for inducing a B cell or T cell response to produce antibodies, or as a vaccine against pathogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to novel recombinant immunogenic chimeric avian hepatitis B core (AHBc) nucleocapsid proteins. Specifically, it refers to an AHBc protein that has been engineered to display an immunogenic B cell or I cell epitope, exhibit enhanced stability and an absence of nucleic acid binding as a self assembled particle. The present invention describes the chimeric AHBc protein as truncated at the C-terminus and
                                 Treating chronic hepatitis B infection by administering a T cell-
stimulating vaccine containing immunogenic particles having recombinant
carboxy-terminal truncated hepatitis B core (HBC) chimeric protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            immunogenic; avian hepatitis B virus; nucleocapsid;
self assembled particle; immunogen; inoculum; vaccine; immunostimulant;
antibacterial; virucidal; B-cell epitope.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Escherichia coli B-cell peptide epitope expressed by HBc chimer Seq 83.

stability in aqueous solution, an increased yield and more immunogenicity than similar conjugates that lack N- or C-terminal cysteines. Furthermore, a reduction in the number of positively charged residues Furthermore, a reduction in the number of positively charged residues (lysine and arginine) towards the C-terminus prepares self-assembled particles that are substantially free of nucleic acid binding. As such, these chimeric particles can be used as immunogens of an inoculum that induce a B cell or T cell response in an animal to produce antibodies. It can also be useful for developing a vaccine to, protect against the pathogen from which the heterologous epitope or the hapten is derived. Accordingly, these compositions exhibit immunostimulant, antibacterial and virucidal activities. This peptide sequence is an exemplary B-cell epitope peptide immunogen useful for both linkage to the linker residue after expression of a contemplated chimer and for expression within an containing introduced cysteine residues that confers an enhanced HBc chimer of the invention 88888888888888888888888888

preparing Recombinant chimer hepatitis B core protein molecule useful for preparir vaccine or inoculum includes peptide-bonded heterologous immunogenic epitope at N-terminus in the hepatitis B core immunodominant loop or Cterminus of the chimer.

Disclosure; SEQ ID NO 79; 110pp; English.

The invention relates to a recombinant chimer hepatitis B core (HBC) protein molecule that includes a peptide-bonded heterologus immunogenic epitope at the N-terminus in the HBC immunodominant loop or the C-terminus of the chimer, or a heterologous linker residue for a conjugated epitope present in the loop. The invention also relates to an immunogenic particle comprising the recombinant hepatitis B core chimeric protein molecules, a vaccine comprising the immunogenic particles dissolved or dispersed in a diluent, a nucleic acid that encodes a recombinant HBC protein molecule or its variant, analogue, or complement and a method for inducing an immune response in an inoculated host animal comprising

animal for a period of time sufficient to enable development of an immune response. The recombinant chiner hepatitis B core protein molecule is used in an immunogenic particle for preparing a vaccine useful for inducing an immune response in an inoculated host animal. This sequence represents an HBc protein immunogenic B cell epitope of the invention. inoculating a host animal with a vaccine and maintaining the inoculated 8888888

ü New recombinant chimer hepatitis B core (HBc) protein molecules useful the fields of immunology and protein engineering, in particular as an immunogen in a vaccine for Hepatitis B infections.

Disclosure; SEQ ID NO 93; 338pp; English

The invention relates to a novel recombinant chimeric Hepatitis B virus nucleocaspid (core) protein (HBC), up to 600 or 380 amino acid residues in length. The chimeric protein is engineered for both enhanced stability of self-assembled particles and the substantial absence of nucleic acid binding by the particles. The invention further comprises: a recombinant HBC protein chimeric molecule that has a length of 135-365 amino acid residues and contains four peptide-linked amino acid residue sequence comparis from the N-terminus that are denominated Domains I, II, III and IV. The invention also provides nucleic acids, polypeptides, host cells, vectors and transgenic animals used in the methods of the invention. The chimeric compositions of the invention have hepatotropic and virucide activities. The methods and compositions of the present invention are useful in the fields of immunology and protein engineering, in particular for using a chimeric hepatitis B virus nucleocapsid protein as an immunogen in a vaccine for Hepatitis B infections. This sequence represents a Hepatitis B virus nucleocapsid core) protein related 

Sequence 18 AA;

```
The invention relates to treating chronic hepatitis, by administering a vaccine comprising immunogenic particles having recombinant hepatitis B core (HBC) chimeric protein molecules (where truncated Hbc molecules are linked N-terminally or C-terminally to an immunogenic epitope), that stimulate T cell production, to a patient chronically infected with hepatitis B virus, and maintaining patient for time sufficient to induce T cells activated against HBC. The chimeric proteins are still capable of the patitis B virus, and maintaining patient for time sufficient to induce T cells activated against HBC. The chimeric proteins are still capable substantially free of binding to nucleic acids, and the particles display chanced stability. Also included is enhancing (M2) the production of one or more of gamma-producing CD8+, CD4+ T cells and cytotoxic T lymphocytes against hepatitis B virus, involving administering to a patient chronically infected with hepatitie B virus, a T cell-stimulating amount of a vaccine comprising immunogenic particles dissolved or dispersed in a ciluent containing one or both of an agonist of toll-infe receptor 9 (TLR-4 and TLR-9), the immunogenic particles comprising HBC chimeric protein molecules and maintaining the patient for a sufficient time to induce T cells activated against HBC. The immunogenic epitopes containing a patient chronically infected with hepatitis B virus, the

Further disclosed is a pharmaceutical composition comprising the peptide of the invention. The composition of the invention is useful for treating a gastrointestinal disorder is gastrointestinal metlity disorder, is gastrointestinal metlity disorder, irritable bowel syndrome, chronic constipation, a functional gastrointestinal metlity disorder, irritable bowel syndrome, chronic constipation, a functional gastrointestinal disorder, gastroesophageal reflux disease, functional gastroparesis, chronic intestinal dyspepsia, nonlock dyspepsia, agastroparesis, chronic intestinal pseudo-obstruction, colonic pseudo-obstruction, Crohn's disease, ulcerative colitis or inflammatory bowel
                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel purified peptide capable of activating the guanylate cyclase (
receptor, useful for treating obesity, congestive heart failure and
present sequence is a B cell epitope suitable for inclusion in the chimeric protein of the invention.

disease. The peptide of the invention is also useful for treating obesity, congestive heart failure, cystic fibrosis or a patient suffering from constipation. The PI/GCC receptor agonist is useful for treating cancer, respiratory disorder, neurological disorder, disorder associated with carbonate imbalance, erectile dysfunction, insulin-related disorder or inner ear disorder. Pl is useful in treating slow digestion or alow stomach emptying. Pl is useful in relieving symptoms of gastroparesis stomach emptying or preventing asthma, nephritis, hepatitis, the sucception or preventing asthma, nephritis, hepatitis, planceatitis, allergies, etc. Pl is useful for treating or preventing type II diabetes mellitus, hyporglycaemia, respiratory disorders including inhalation. Pl is useful for treating or preventing represently nephropathy and edema formation. Pl is useful for treating or preventing haddech, anxiety, sleep disorders and memory loss. Pl is useful as a marker to identify, detect, stage, or diagnosis diseases and conditions of the small intestine, including Crohn's disease, onlits, inflammatory bowel disease, tumours, etc. Pl can be conjugated to diagnostic or therapeutic molecule to target cells bearing GC-C receptor, e.g., cystic throats lesions and specific cells lining the intestinal tract, thus useful in targeting radioactive moleties or therapeutic moieties to the intestine to aid in imaging and diagnosing or treating contesting to the colorectal/metratasised or local colorectal cancer. The current sequence representes a bacterial ST peptide which is an activator of the GC-C receptor. ST peptide are considered super agonists of GC-C and are very resistant to proteolytic degradation.

Novel purified peptide capable of activating the guanylate cyclase Creceptor, useful for treating obesity, congestive heart failure and benign prostatic hyperplasia.

Disclosure; Page 28; 93pp; English.

The invention relates to a purified peptide (P1) capable of activating the guanylate cyclase C (GC-C) receptor. Further disclosed is a the guanylate cyclase C (GC-C) receptor. Further disclosed is a composition comprising the peptide of the invention. The composition of the invention is useful for treating a gastrointestinal disorder, which involves administering P1, where the gastrointestinal disorder, gastrointestinal motility disorder, irritable bowel syndrome, chronic constipation, a functional constrabur, dyspepsia, functional dyspepsia, nonuleer dyspepsia, constrabur, dyspepsia, functional dyspepsia, nonuleer dyspepsia, gastroparesis, functional disorder, gastroparesis, constrainal pseudo-obstruction, colonic pseudo-obstruction, colonic pseudo-obstruction, colonic pseudo-obstruction, colonic pseudo-obstruction, colonic pseudo-obstruction, constipation. The P1/GC-c receptor agonist is useful for treating obstruction the P1/GC-c receptor agonist is useful for treating cancer, respiratory disorder, neurological disorder, disorder associated with carbonate imbalance, erectile dysfunction, insulin-related disorder cor inner ear disorder. Pl is useful in treating show diseatoparesis such as nausea, vomitting, bloating, and delayed gastric emptying. Pl is useful for treating or preventing than an ausea, vomitting, bloating, and delayed gastric emptying. Pl is useful for treating inhalation. Pl is useful for treating or preventing treating inhalation. Pl is useful for treating retinopathy, chapters, and edema formation. Pl is useful for treating or preventing treating inhalation. Pl is useful for treating or preventing the maxiety, saleed disorder and memory loss. Pl is useful confused to disposed or the small intestine, including Crohn's disease, colitis, inflammatory confused by the small intestine, including Crohn's disease, colitis, inflammatory useful in transition and peculistical colls bearing of the amenial in transition are and expectition and expectition and expectition and expectition and peculisticals useful in targeting radioactive moieties or therapeutic moieties to the intestine to aid in imaging and diagnosing or treating colorectal/metastised or local colorectal cancer. The current sequence represents a bacterial ST peptide which is an activator of the GC-C receptor. ST peptides are considered super agonists of GC-C and are very to proteolytic degradation. receptor. Amino acid sequence of peptide ST I* inhibiting ST activity.

```
The inventors claim peptides of formula (P)n (see FT; see also AAP30263) having 4n-18n amino acids and pref. being laevorotatory (where n is 1 or 2). In AAP30262 and AAP30263, N=2. When n is 2, the peptide comprises two peptide sequences P, which may be the same or different, each having 4-18 amino acids chosen from the peptide P SQ in AAP30262 or AAP30263. The two F sequences may be joined (a) by a disulphide bond or (b) by a bond formed between a carboxyl gp. of one sequence of an amino gp. of the other. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                   Peptide(s) used to vaccinate against E. coli enterotoxin(s) - contg. e.g. asparagine threonine phenylalanine tyrosine cysteine cysteine glutamic acid leucine cysteine cysteine asparagine sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Conjugated cpds. which specifically bind to colorectal cancer cells comprise heat-stable toxin receptor binding moiety and active moiety which may be a therapeutic agent or a radioactive agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   receptor; ligand; heat-stable toxin; conjugate; imaging; cancer;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             stable toxin (ST) receptor molecules on the surface of a merastasised colorectal cancer cell. The method comprises administering, by continuous infusion, at least 0.1 mh of an ST receptor ligand per 10 kg bodyweight per hour for at least 6 hours, where ST receptor ligand molecules bind to ST receptors on the surface of the cancer cell in the individual and the number of ST receptor molecules on the surface of the cancer cell is increased. Therapeutic compositions comprising components which target ST receptors can then be used to inhibit proliferation of the colorectal, gastric and oesophageal cells. This method may be used for treating individuals that have diseases that affect colorectal, gastric and coesophageal cells, including colorectal, gastric or oesophageal cancers. The present sequence represents a peptide which inhibits ST activity, and is designated ST I* It is used as the ST receptor ligand in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                        Increasing ST receptor molecules on the surface of a colorectal, gastric or esophageal cancer cell to treat these cancers comprises administering ST receptor ligand molecules that bind to ST receptors on the surface of the cancer cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specification describes a method for increasing the number of heat

New conjugated compounds are provided which consist of (1) an ST receptor binding molety and (2) an active molety which is a radio- stable agent. 'ST' refers to a heat stable toxin produced by B.coli and other organisms. Especially the radiostable agent is a therapeutic agent (e.g. methotrexate, doxorubicin, mitomycin), imaging agent (e.g. radioactive isotope) or nucleic acid; and the compound is used for the detection, imaging or treatment of colorectal tumours, particularly metastasised tumours. The present sequence is a specific example of an ST receptor binding peptide which can be used in the conjugate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New conjugated compounds are provided which consist of (1) an ST receptor binding moiety and (2) an active moiety which is a radio- stable agent.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 3,

Sequence 3, Application US/08635930

Patent No. 6060037

GENERAL INFORMATION:

APPLICANT: Waldman, Scott A.

TITLE OF INVENTION: Compositions That Specifically Bind To

TITLE OF INVENTION: Colorectal Cancer Cells And Methods Of Using

TITLE OF INVENTION: The Same

NUMBER OF SEQUENCES: 54

CORRESPONDENCE ADDRESS:

ADDRESSEE: Woodcock Washburn Kurtz Mackiewicz & No. 6060037ris

STRET: Den Liberty Place, 46th Floor

CITY: Philadelphia

STATE: Pennsylvania

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
